

OFFSHORE

Complete production of welded units incl. machining, surfacing and the assembly for offshore and onshore.

We manufacture equipment and components for oil, minerals, gas transport and production of maritime manipulators. It is devices installed on ships controlling oil rigs, parts of anchoring system guiding for floating oil rigs, winches, underwater piping system components used for oil and gas extraction and handling frames for undersea technology.

WE OFFER:

- parts of oil rigs (platforms, frames, piping etc.)
- welded and machined frames for mining equipment operating at great depths used for oil and gas with high demands on production quality, dimensional and NDT checking
- conveyors used as sheaves for handling and guiding the chain into the ship under-deck
- complete production of drums and winches
- winch reel frame including equipment
- parts of anchoring system guiding for floating oil rigs, NDT and supervision according to the DNV
- cranes, manipulators and handling devices

These products are mostly manufactured from structural steels of the S355 grade, under the special production conditions and NDT inspection according to pertinent standards.
